

Wireless Network Configuration for Windows 10

1. From the device's System Tray, click on the **Wi-Fi** icon

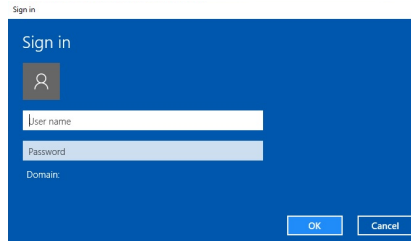

2. If the Wireless Network Connection is **Turned Off**, you will need to activate the wireless radio on your device. The method may vary depending on your device. Consult the manufacturer specific details regarding your device for specifics on how to enable the Wi-Fi. (ie: Fn/F3)

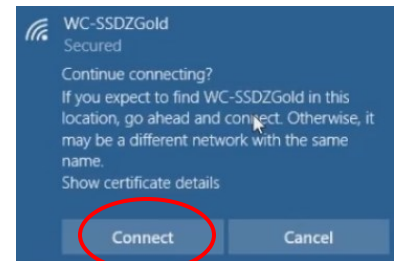

3. Choose **WC-SSDZGold** or **WC-SSDZSilver** (choose Gold if you see both) from your list of available wireless networks and then click **Connect**

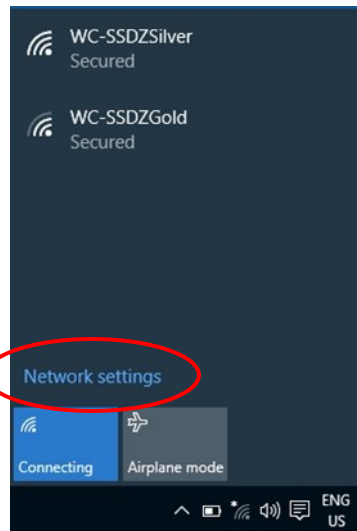

4. You will be asked to provide your **User name and Password**. Use your Wolf Creek user name (firstname.lastname) and your Wolf Creek password.

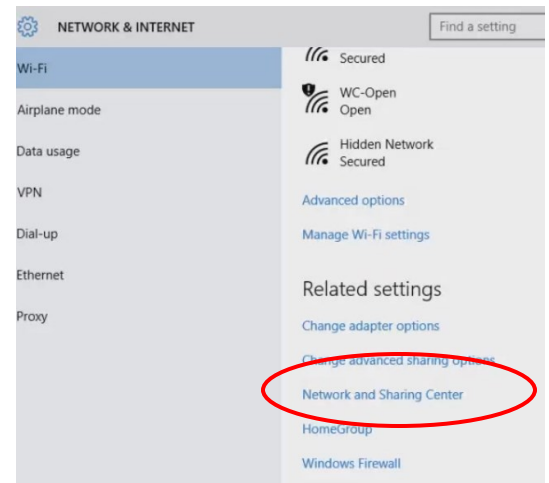

5. From the screen with the Continue connecting? screen, choose **Connect**

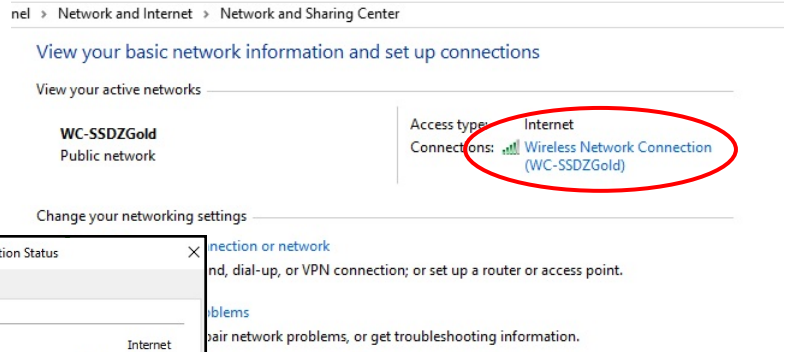

6. Choose **Network Settings**

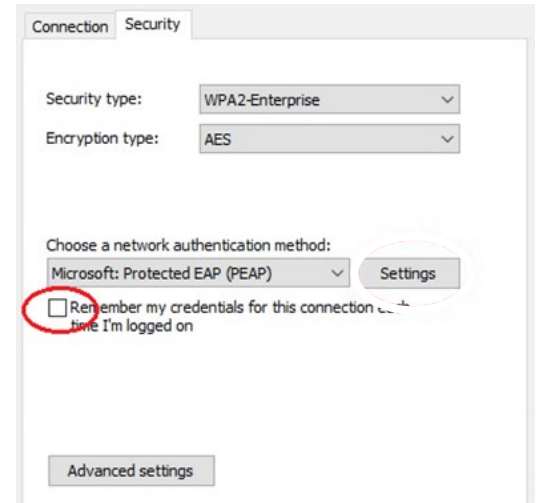

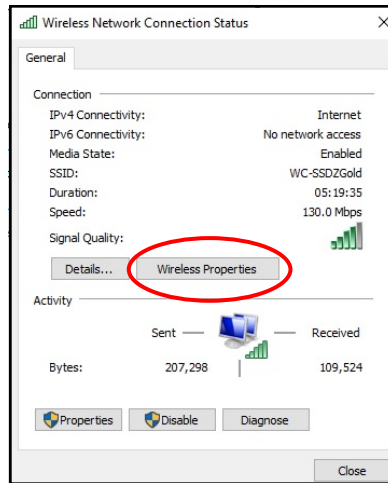

7. Scroll down to **Network and Sharing Center**

8. Select the **Wireless Network Connection**

9. Choose **Wireless Properties**

10. Click on the Security tab in the resulting window.

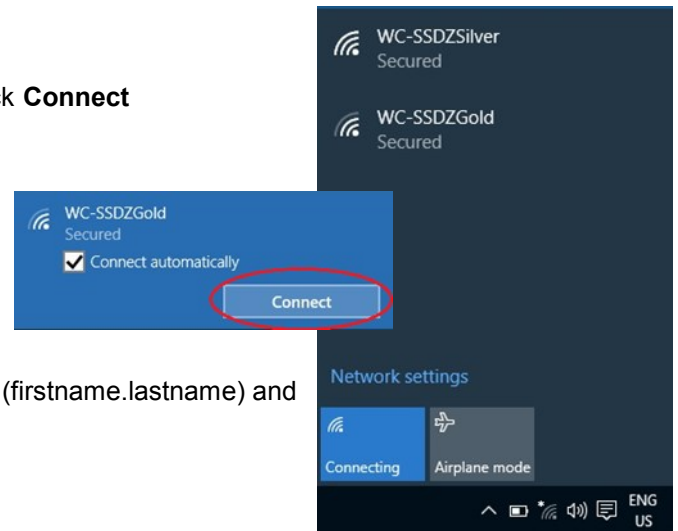

11. Uncheck the **Remember my credentials for this connection each time I'm logged on**. Remembering credentials isn't advised on a shared device.

12. Click **OK** and close all the open windows,

13. From the device's System Tray, click on the **Wi-Fi** icon

14. Choose the network you are connecting to and then click **Connect**

15. You will be asked to provide your **User name and Password** once more. Use your Wolf Creek user name (firstname.lastname) and your Wolf Creek password.

16. **Done!** Set up is complete and you are logged into the Wolf Creek SSDZ Wi-Fi and connected to the internet.
